PUMP TRACK

*A MULTISPORT URBAN PLAYGROUND
FOR ALL GENERATIONS*

WHAT IS A PUMP TRACK?

The pump track is a sports facility, consisting of paved rollers and turns that are rhythmically connected with each other into a circular entity.

The multifunctionality of the facility provides a fun yet safe sports experience even in smaller areas.

It allows users to learn how to ride a bike or other sports equipment and also serves as a training ground for top athletes. Riding on a pump track is physically intense and strengthens the development of motor skills.

We do not ride along the pump track by pushing or pedaling, but by moving the body's center of gravity. It is an innovative way of riding a pump track that separates it from other sports facilities

Pumptracks are a safe and fun multisport facility for every generation, but those are not the only reasons why you should have one in your community.

1

Inclusive

A pumptrack combines over 15 sports as well as wheelchairs on a single object, suitable for users of all ages and abilities. From the beginner to the expert, our pump tracks are sure to provide hours of fun!

2

Safe

Designed in close cooperation with safety experts and professional athletes, Alliance pumptracks are safe for the users of the age 2+ and are certified to comply to all corresponding norms.

3

Durable

Due to its asphalt surface pumptrack is durable and safe from weather and vandalism, while its maintenance is minimal. All Alliance pumptracks are covered with 7-year warranty.

4

Fast and simple

The implementation of the pumptrack is fast and simple. At Alliance we take for the whole process, from planning to construction and attractive opening. We built most of the pumptracks in less than 3 weeks.

5

Promotes healthy and active lifestyle

Pumptracks are attractive multisport playground, providing hours of fun and healthy exercise for the whole community. As such they empower a healthy and active lifestyle as well as social integration.

6

Revives neighborhoods

A Pump track is not just a sports facility. Due to their unique and attractive look, a wide range of users and the ability to position it on smaller areas in the immediate vicinity of users, pump tracks revive urban centers and neighborhoods and revitalize unused or degraded areas.

**REASONS
TO BUILD A
PUMPTRACK**

Today the policy of public space design dictates the accommodation of sports infrastructure that is diverse but at the same time addresses the widest range of users. A pump track meets these criteria, and its installation in the form of a public sports infrastructure is a prudent decision, especially because:

- ▲ The local community will be grateful to receive a modern, attractive, and multifunctional sports facility that will become a meeting point for the widest group of users. This is confirmed by the intensive use of more than 100 pump tracks.
- ▲ A pump track is an investment in the local community that pursues socio-political goals. It adds to the attractiveness of the neighbourhood, promotes movement and a healthy lifestyle, social integration etc.
- ▲ By implementing a pump track, one can be care-free. A pump track is safe for users from the age of 2+ and has all the necessary safety certificates. Due to its asphalt surface, it is durable, comes with a 5-year warranty, and requires minimal maintenance. In addition, a pump track is cheaper than ordinary sports facilities.
- ▲ The implementation of a pump track is quick and easy. It is an undemanding sports facility, and we at Alliance take care of the entire process, from planning through construction and an attractive opening. Most pump tracks are built in 14 days.

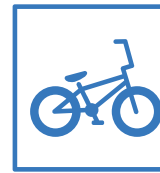

SMART CHOICE

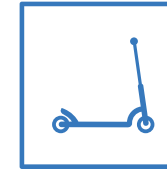

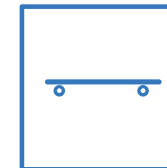

EXCITED COMMUNITY

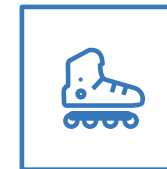

The local communities which pride themselves on one of our pump tracks are enthusiastic and grateful.

A pump track is an attractive and inclusive facility for the entire community. It is suitable for all skill levels and all ages, from 2 to 70 years. It is accessible because there is no new or expensive sports equipment required to use it on the pump track. Its unique design does not only allow the use of bicycles but also scooters, skateboards, rollerblades, pushbikes, other wheeled sports equipment, and even wheelchairs.

The attractive appearance of a pump track also enlivens the neighbourhood and promotes movement and motor skill development of all generations in an innovative way, thus becoming an intergenerational meeting point for the entire local community.

The pump track is a modern and multi-functional sports facility for the entire community (for users aged 2 to 70 on wheeled sports equipment).

Riding on a pump track is easy, intuitive, safe, and fun.

Safety and quality are our top priorities while planning as well as during construction and maintenance, so that investors like you can be completely carefree.

The pump track has been adapted for users from the age of 2 and above. We demonstrate safety with a certificate of compliance with European & international safety standards, and we also obtain a safety assessment by an independent expert for all pump tracks. Despite the safety, pump tracks are attractive and encourage movement in a fun way. We are constantly improving in the field of safety and are members of the renowned international institution for the prevention of injuries RoSPA (The Royal Society for the Prevention of Accidents).

Alliance pump tracks have an asphalt surface that is not only safe to use in all weather conditions, but is at the same time also durable and requires almost no maintenance. Because we are aware that a pump track is a long-term investment in the local community, we provide a 7-year warranty on the basis of rich experience, quality materials, and precise implementation.

**SAFE
LASTING
CAREFREE**

SIMPLE AND ATTRACTIVE

Pump tracks are more accessible than other sports infrastructure. Their implementation is quick and easy because in most countries a building permit is not required. Construction is possible in less than 14 days. The asphalt surface ensures durability, resistance to vandalism and requires minimal maintenance.

The pump track is not just a sports facility. Due to their unique and attractive appearance, wide range of users, and the possibility to install them in smaller areas, they enliven urban centers and neighbourhoods.

Pump tracks are characterized by an attractive urban design. The ride through a pump track is quiet and clean and therefore very friendly to the surrounding residents.

All Alliance pump tracks have custom design tailored to the needs of main user groups, available resources, and area. In addition, we have a variety of specialized pump track types to offer.

TYPES OF PUMP TRACKS

TYPES OF
PUMP TRACKS

KIDS' TRACK

The Kids' Track is designed for kids aged 2 and above, enabling them to gain basic skills with balance bikes. Riding the Kids' Track is not only safe and fun but also supports the development of balance and coordination. Kids Tracks are also suitable for wheelchairs.

Due to the small size of the Kids' Track, it fits almost anywhere and can be a perfect addition to the standard pump track.

TYPES OF
PUMP TRACKS

BEGINNER TRACK

A Beginner Track is the perfect solution for schools and educational institutions as well as for neighborhoods, because it is especially designed for older kids and beginners.

The Beginner Track is an upgrade of the Kids' Track, with higher berms and rollers, enabling beginners to gain basic skills on various wheeled sports equipment in a safe and easy manner.

TYPES OF
PUMP TRACKS

ALL-ROUND TRACK

The All-Round Track is our standard track. It serves the needs of the widest spectrum of users, ranging from beginners to experienced users on all kinds of wheeled sports equipment.

Its design enables less-skilled users to roll over certain features, which can be jumped over by more experienced users. The All-Round Track enables fast progression and remains fun in the long run.

TYPES OF
PUMP TRACKS

RACE TRACK

Pump tracks are the perfect training ground for at least 3 Olympic sports. As the name suggests, the Race Track is especially designed to host elite sportsmen for training and competition. Higher berms and special features enable the development of higher speeds. At the same time, it is still suitable for others, including beginners.

TYPES OF
PUMP TRACKS

JUMP LINE

The Jump Line is an attractive addition to an All-Round or Race Track featuring several jumps in a line. While it is possible to jump over certain features on a standard pump track, the Jump Line is designed solely for jumping and performing tricks.

BUILDING A BETTER WORLD

At Alliance, we live, work, and play outside. Therefore it is super important for us to help preserve the environment and foster local communities around the globe. Sustainability is not just a fancy word for us, but it is represented through our everyday work and actions, whether in our professional or personal life.

^ COMMITTED TO ENVIRONMENT

Minimizing our impact on the environment starts with a thorough selection of the most suitable location for the implementation of our infrastructure. We focus on degraded and obsolete areas wherever possible. We use recycled materials and make sure to use the shortest transport routes. Nevertheless, our solutions are long-lasting and our pump tracks are easy to maintain. With thorough planning and implementation, we furthermore promote recycling and environmentally friendly behavior in our facilities.

^ COMMITTED TO LOCAL COMMUNITIES

At Alliance, we promote a healthy and active lifestyle through the infrastructure and events we provide. Our facilities are as inclusive and accessible as possible, hosting also disabled and deprived. Growing up with the scarce of action sports infrastructure, we understand its value. That is why we help deprived communities in several countries every year to get the appropriate infrastructure.

^ COMMITTED TO LOCAL ECONOMIES

Alliance pump tracks are 99 % locally or regionally made. We almost exclusively use materials from the local environment, supporting local businesses and the local economy. We also cooperate with local contractors and even volunteers to further decrease project costs whenever possible.

ORIGINATING FROM UPPER AUSTRIA, BUILDING WORLDWIDE

Alliance is made up of passionate and highly qualified experts with diverse knowledge, ranging from sports, construction, engineering, to architecture and marketing. We have more than 15 years of experience in planning and building sports infrastructure for action sports and cycling. After designing, planning, and building over 100 asphalt pump tracks in a variety of countries, our architects, engineers, and builders gained valuable experience which will guarantee that your pump track will meet the highest safety and quality standards.

DESTINATIONS

WE BUILD PUMPTRACK FROM START TO FINISH

Through the combination of our professional design and construction teams, Alliance ASE is able to offer a full, streamlined experience to our clients. This service eliminates any complications that tend to come up when working with multiple design and construction companies.

At Alliance ASE we are able to produce high-quality pump tracks quicker and more efficiently due to this integrated approach. Our design deliverables and construction documents are familiar to our construction crews, and any issues that may arise in the field can be quickly combated by our in-house design team. We are your one-stop-shop for any of your pump track design and construction needs.

WHY CLIENTS TRUST US

ONE POINT OF CONTACT

We provide a full scope of services, ranging from conception to detailed planning, construction, maintenance, and promotion of your pump track. As we are not intermediaries, we can supervise the entire process, ensure a fast installation and the highest possible quality.

EXPERT KNOWLEDGE

Creating organic shapes and coating almost vertical slopes with asphalt requires special skills. With more than 100 pump tracks built and our signature asphalt mixture, our crews have what it takes to deliver a high-quality pump track for your community.

7 YEARS WARRANTY

Being dedicated to quality, we are proud to offer a long-term warranty for all our pump tracks. A 7-year- warranty is the longest in the industry and shows just how confident we are in the durability of our pump tracks.

CUSTOM DESIGN

Each of our pump tracks is custom designed by our team of experienced pump track planners, builders, and landscape architects, to suit the needs of the local community and to fit perfectly in the available area.

FLEXIBILITY

We are flexible and create all sizes of pump tracks, from tiny Kids' Tracks to the biggest pump tracks. When it is more efficient and cheaper for the investor, we also cooperate with local contractors on common construction works.

SAFE AND TÜV APPROVED

Safety is our utmost priority. We design and build all our pump tracks in accordance to corresponding norms and standards. All our pump tracks are also inspected by an independent safety expert.

HOW MUCH DOES AN ALLIANCE PUMP TRACK COST?

The price of our pump tracks depends on several factors, such as size, target groups, type of revegetation, urban furniture, etc. All our pump tracks are individually designed and adapted to the investors' needs as well as to the shape of the available area. The price of the smallest pump tracks starts at 20.000 Euro, while bigger can cost up to 0.5 million Euro. Our pump tracks which welcome more than 15 different sports are consequently more affordable than similar sports infrastructure. If you are interested in the cost of a pump track in a certain area, contact us and we will prepare a conception for you free of charge.

IS A PUMP TRACK SAFE?

Safety and quality are our utmost priorities during all stages: planning, construction, and maintenance. We focus especially on the safety of the youngest users. The Swiss Council for Accident Prevention – BFU puts pump tracks in the same group as kids' playgrounds. Pump tracks are consequently safe for users of the age of 2 and above. All Alliance pump tracks conform to relevant European safety standards and are assessed by an independent safety expert.

PUMP TRACK FAQ

WHY IS IT CRUCIAL THAT A PUMP TRACK IS DESIGNED AND BUILT BY A SPECIALIZED CONTRACTOR?

Designing and building a pump track is a combination of engineering and art. Due to the organic shapes of a pump track, plans can only be realized if they are performed by experienced construction teams who can also test the pump track during the construction. Apart from laying the foundation of the pump track, manual asphalt laying is also very specific. Due to the rounded objects, inclinations up to 70 degrees, and the need for a smooth-riding surface, special asphaltting techniques and equipment are required. As a consequence, we strongly suggest trusting your pump track project to the contractor with at least 5 constructed pump tracks of similar size.

ARE YOU ONLY DESIGNING OR ALSO BUILDING PUMP TRACKS?

Alliance offers a full scope of services, from design and planning to construction and promotion. Due to the specific characteristics of pump tracks, all Alliance pump tracks are planned and built by our experienced construction crews. On the other hand, all common construction works such as platform construction, drainage, landscaping, etc. can be done by local contractors.

HOW LONG DOES A PUMP TRACK CONSTRUCTION TAKE?

The construction time depends on the size of the pump track. Usually, we build most of our pump tracks in less than 3 weeks.

WHAT AMOUNT OF MAINTENANCE DOES THE PUMP TRACK REQUIRE?

Alliance pump tracks have an asphalt riding surface which makes them durable and resistant to weather and vandalism. The amount of required maintenance is consequently limited and primarily consists of cleaning the riding surface and the wider area as well as maintaining green areas.

Can't find your question on our list? Send us your question and one of our pump track experts will get back to you shortly.

Ask a question info@alliancease.com

We listen to your wishes and needs and try to find the most suitable solution. Based on the target group of users, spatial, financial, and other factors, our planners design the most suitable pump track at the desired location. We offer complete turnkey or partial solutions, from planning to implementation, promotion, and organization of events.
